

Theory of Computation

Regular Expression Part-1

DPP-02

[MSQ]

1. Which of the following is/are true?

- (a) $(a^*b^*)^* = (b^*a^*)^*$
- (b) $(a + \epsilon)^+ = a^+$
- (c) $(a + b)^*(ba)^* = (ab)^*(a + b)^*$
- (d) $(ab + ba)^* = (ab(ab)^* + ba(ba)^*)^*$

[MCQ]

2. Consider the following regular expressions:

- (I) $a^*b^* + a^*$
- (II) $(\epsilon + aa^*)(bb^* + \epsilon)$
- (III) $b^*a^* + a^*b^* + b^*$
- (IV) aa^+bb^+

Which the following is equivalent to a^*b^* ?

- (a) (I) and (II) only
- (b) (I) only
- (c) (II) and (III) only
- (d) (I) and (IV) only

[MCQ]

3. Which of the following is not correct?

- (a) $a^*bb^* = a^*b^+$
- (b) $a^*a^+ = a^+$
- (c) $a^+a^+ = a^+$
- (d) $\phi^* = \epsilon$

[MSQ]

4. Regular expression can be used in:

- (a) Lexical Analysis
- (b) Pattern matching
- (c) String matching
- (d) Syntax analysis

[MCQ]

5. Consider the regular expression:

regular expression = $a^*b(a + ba^*)^*$

Above regular expression is equivalent to which of the following below regular expression?

- (a) $ba^*(bb)^*$
- (b) $ba^*(a + ba^*b)^*$
- (c) $(b + aa^*b) + (b + aa^*b)(ba^*b + a)(ba^*b + a)^*$
- (d) $a^*b(a + b)^*$

[MCQ]

6. Which of the following statement will generate finite language?

- (a) PDA with finite stack.
- (b) Regular expression without kleene star and kleene plus.
- (c) Regular expression with unary alphabet.
- (d) Regular expression with binary alphabet.

[MCQ]

7. Consider following regular expressions:

[I] $(ab)^*a = a(ab)^*$ [II] $(bb)^*b^* = b^*$ [III] $(b + \epsilon)^+ = b^*$

Which of the following is correct?

- (a) II and III only.
- (b) I and II only.
- (c) All are correct.
- (d) None of these are correct.

[NAT]

8. Consider the string $\left[(ab)^{10}(ab)^7((ab)^3)^2 \right]^2$,
the length of the string is ____.

Answer Key

1. (a, c, d)
2. (a)
3. (c)
4. (a, b)

5. (d)
6. (b)
7. (a)
8. (46)

Hints and Solutions

1. (a, c, d)

$$(a) \quad (a^*b^*)^* = \{\epsilon, a, b, \dots\}^* \\ = (a+b)^*$$

$$(b^*a^*)^* = \{\epsilon, a, b, \dots\}^* \\ = (a+b)^* \quad \text{True}$$

$$(b) \quad (a+\epsilon)^+ = a^+ + \epsilon \\ = a^* \quad \text{False}$$

$$(c) \quad (a+b)^*(ba)^* = (a+b)^* \epsilon \\ = (a+b)^*$$

It will generate all the strings on alphabet $\{a, b\}$

$$(ab)^*(a+b)^* = \epsilon(a+b)^* \\ = (a+b)^* \quad \text{True}$$

$$(d) \quad \{(ab)(ab)^* + (ba)(ba)^*\}^* \\ = (ab+ba)^* \quad \text{True}$$

2. (a)

Regular expression = a^*b^*

$$a^* = \epsilon + aa^*$$

$$b^* = \epsilon + bb^*$$

- $a^*b^* + a^* = a^*b^*$
- $a^*b^* + a^* = (\epsilon + aa^*)(bb^* + \epsilon)$

Hence, (a) is correct.

3. (c)

$$(a) \quad a^*bb^* = a^*b^+ \quad \text{Correct}$$

$$\text{Because } r^*r^* = r^+$$

$$(b) \quad a^*a^+ = a^+ \quad \text{Correct}$$

$$r^*r^+ = r^+ = r^*r^* \quad \text{All are equal}$$

$$(c) \quad a^+a^+ = aa^*aa^* \quad \text{Incorrect} \\ = (aa)a^*$$

$$(d) \quad \phi^* = \epsilon \quad \text{Correct}$$

* contain minimum string ϵ .

4. (a, b)

Regular expression can be used in pattern matching, lexical analysis, text editing etc.

5. (d)

$$a^*b(a+ba^*)^*$$

$$\text{Put } a^* = \epsilon$$

$$a^*b(a+b)^*$$

6. (b)

- PDA with finite stack is same as DFA, and DFA can generate finite and infinite language.
- Regular expression without kleene star(*) always generate finite language.

Note: Kleene plus(+) is an expansion of kleene star(*).

- a^* = infinite
- $(0+1)^*$ = infinite

7. (a)

- $(ab)^*a = a(ab)^*$ **False**
- $(bb)^*b^* = \{\epsilon, b, bb, bbb, bbbb \dots\} \\ = b^* \quad \text{True}$
- $(b+\epsilon)^+ = (b^++\epsilon) = b^* \quad \text{True}$

8. (46)

$$= \left[(ab)^{10} (ab)^7 ((ab)^3)^2 \right]^2$$

$$= ((ab)^{17} (ab)^6)^2$$

$$= (ab)^{46}$$

Length of the string = 46.
